Domain 4: Billing, Pricing, and Support

Task Statement 4.1: Compare AWS pricing models.

Knowledge of:
• Compute purchasing options (for example, On-Demand Instances, Reserved Instances, Spot Instances, Savings Plans, Dedicated Hosts, Dedicated Instances, Capacity Reservations)
• Data transfer charges
• Storage options and tiers
Skills in:
• Identifying and comparing when to use various compute purchasing options
• Describing Reserved Instance flexibility
• Describing Reserved Instance behavior in AWS Organizations
• Understanding incoming data transfer costs and outgoing data transfer costs (for example, from one Region to another Region, within the same Region)
• Understanding different pricing options for various storage options and Tiers

Below is a **detailed, exam-oriented explanation** of

Domain 4 – Task Statement 4.1: Compare AWS Pricing Models (CLF-C02)

I'll explain **each concept + every AWS service referenced**, highlight **exam traps**, and keep it **simple but thorough**.
👉 As requested, **ALL AWS service names are written with FULL FORMS when first mentioned**.

🔷 Domain 4 – Billing, Pricing, and Support

📌 Task Statement 4.1: Compare AWS Pricing Models

This task tests whether you understand **HOW AWS charges money**, **WHEN to choose each pricing option**, and **common billing misconceptions**.

1️⃣ Compute Purchasing Options (VERY IMPORTANT FOR EXAM)

AWS offers **multiple ways to pay for compute**, mainly for **Amazon Elastic Compute Cloud (Amazon EC2)**.

🔹 1. Amazon EC2 On-Demand Instances

Definition:
Pay for compute capacity **by the second or hour**, with **no long-term commitment**.

Best for:

- Short-term workloads
- Unpredictable traffic
- Development and testing
- First-time workloads

Exam keywords:

- “No upfront payment”
- “Flexibility”
- “Unpredictable usage”

❌ **Trap:** Most expensive option long-term
✅ **Correct use:** Start fast, stop anytime

🔹 2. Amazon EC2 Reserved Instances (RIs)

Definition:
Commit to **1 year or 3 years** in exchange for **significant discounts** (up to ~72%) compared to On-Demand.

Types of payment:

- All Upfront

- Partial Upfront
- No Upfront

🔸 **Reserved Instance Flexibility (EXAM FAVORITE)**

- **Standard Reserved Instances**
  - Can change **instance size within the same instance family**
  - Example: `m5.large → m5.xlarge`
  - Highest discount
- **Convertible Reserved Instances**
  - Can change **instance family, OS, tenancy**
  - Lower discount but more flexibility

🔸 **Reserved Instances & AWS Organizations**

- Reserved Instance discounts are **shared automatically** across accounts in an **AWS Organization**
- Helps reduce total cost across multiple teams

✅ **Exam Trap:**
Reserved Instances are **NOT tied to a specific instance**, but to **billing usage**

🔹 3. Amazon EC2 Spot Instances

Definition:
Use **unused EC2 capacity** at discounts up to **90%**, but AWS can reclaim them anytime.

Best for:

- Fault-tolerant workloads
- Batch processing
- Data analysis
- CI/CD jobs

❌ **Not suitable for:**

- Databases
- Stateful applications
- Critical production systems

Exam keyword: “Can be interrupted with short notice”

🔹 4. AWS Savings Plans

Definition:
Commit to a **dollar amount per hour** (e.g., $10/hour) for **1 or 3 years**.

Two types:

- **Compute Savings Plans**
  Flexible across EC2, AWS Fargate, and AWS Lambda
- **EC2 Instance Savings Plans**
  Locked to instance family but cheaper

✅ **Exam Tip:**
Savings Plans = **more flexible than Reserved Instances**

🔹 5. Amazon EC2 Dedicated Hosts

Definition:
A **physical server fully dedicated** to one customer.

Used for:

- Compliance
- Regulatory requirements
- Bring-your-own-license (BYOL)

❌ Most expensive option

🔹 6. Amazon EC2 Dedicated Instances

Definition:
Instances run on **dedicated hardware**, but hardware may be shared with other Dedicated Instances.

📌 Less control than Dedicated Hosts

🔹 7. Amazon EC2 Capacity Reservations

Definition:
Reserve capacity in a **specific Availability Zone**, ensuring availability when needed.

Used for:

- Mission-critical workloads
- Disaster recovery
- Regulatory requirements

❌ No cost savings by default (unless combined with RIs or Savings Plans)

2️⃣ Data Transfer Charges (MAJOR EXAM TRAP)

AWS **charges differently based on direction and location** of data transfer.

🔹 Incoming Data Transfer

✅ **FREE in almost all cases**

Example:

- Internet → AWS Region = **$0**

🔹 Outgoing Data Transfer

💰 **Charged**

Examples:

- AWS → Internet = **Charged**
- AWS Region → Another Region = **Charged**
- AWS Availability Zone → Another AZ = **Charged**

🔹 Within Same Availability Zone

- Data transfer **within the same AZ is free**

🔹 Inter-Region Transfer

- Always charged
- Common exam scenario for **unexpected high bills**

3️⃣ Storage Pricing Options & Tiers

AWS storage pricing depends on **type, durability, performance, and access frequency**.

🔹 Amazon Simple Storage Service (Amazon S3) – Object Storage

Storage Class	Use Case	Cost
S3 Standard	Frequently accessed data	High
S3 Standard-IA (Infrequent Access)	Backup	Lower
S3 One Zone-IA	Non-critical data	Cheaper
S3 Glacier Instant Retrieval	Archive, fast access	Low
S3 Glacier Flexible Retrieval	Archive	Lower
S3 Glacier Deep Archive	Long-term archive	Cheapest

📌 **Exam Tip:**
Lower storage cost = higher retrieval cost and latency

🔹 Amazon Elastic Block Store (Amazon EBS) – Block Storage

- Charged by **provisioned capacity**
- SSD costs more than HDD
- Used with EC2

🔹 Amazon Elastic File System (Amazon EFS) – File Storage

- Pay per GB used
- Automatically scales
- Higher cost, high availability

🔹 AWS Backup

- Centralized backup service
- Charged based on:
  - Backup storage
  - Restore operations

🔥 High-Value Exam Traps Summary

Trap	Correct Understanding
Reserved Instances lock you to an instance	❌ No, they apply to billing
Incoming data is expensive	❌ Incoming is usually free
Spot Instances are reliable	❌ They can be interrupted
Dedicated Hosts save money	❌ They cost more
Savings Plans = Reserved Instances	❌ More flexible

🎯 What AWS REALLY Tests Here

- Can you **choose the cheapest option** for a scenario?
- Do you understand **hidden data transfer costs**?
- Can you differentiate **Reserved Instances vs Savings Plans vs Spot**?

Perfect 👍
Here is the **NEXT STEP** as promised.

🔥 Domain 4 – Task 4.1

10 Exam-Trap MCQs (AWS Billing & Pricing)

(CLF-C02 style – tricky but realistic)

Q1.

A startup wants maximum flexibility with **no long-term commitment** while running unpredictable workloads on **Amazon Elastic Compute Cloud (Amazon EC2)**.
Which pricing model should they choose?

A. Reserved Instances
B. Savings Plans
C. Spot Instances
D. On-Demand Instances

Q2.

Which option provides the **HIGHEST discount** but can be **interrupted by AWS** at short notice?

A. On-Demand Instances
B. Reserved Instances
C. Spot Instances
D. Dedicated Hosts

Q3.

A company commits to spending **$20 per hour for compute usage** across **Amazon EC2, AWS Lambda, and AWS Fargate**.
Which pricing model is this?

A. EC2 Instance Savings Plans
B. Compute Savings Plans

C. Standard Reserved Instances
D. Capacity Reservations

Q4.

Which pricing option allows you to **bring your own software license (BYOL)** and requires **physical server-level control**?

A. Dedicated Instances
B. Spot Instances
C. Dedicated Hosts
D. Capacity Reservations

Q5.

Which statement about **incoming data transfer** into AWS is TRUE?

A. Incoming data transfer is always charged
B. Incoming data transfer is free in most cases
C. Incoming data transfer costs more than outgoing
D. Incoming data transfer is free only within the same Region

---

Q6.

Data transferred between **two Availability Zones in the same AWS Region** is:

A. Free
B. Charged
C. Free only for Amazon EC2
D. Free only for Amazon S3

Q7.

A company uses **Amazon EC2 Reserved Instances** in an **AWS Organization** with multiple accounts.
How are the discounts applied?

A. Only to the purchasing account
B. Only to the root account
C. Automatically shared across accounts
D. Only to instances in the same Availability Zone

Q8.

Which storage class is the **LOWEST cost** option for data accessed **once per year** and retrieved rarely?

A. Amazon S3 Standard
B. Amazon S3 Standard-Infrequent Access
C. Amazon S3 Glacier Flexible Retrieval
D. Amazon S3 Glacier Deep Archive

Q9.

Which option guarantees **EC2 capacity availability in a specific Availability Zone**, but does **NOT provide cost savings by default**?

A. Reserved Instances
B. Savings Plans
C. Capacity Reservations
D. Spot Instances

Q10.

Which statement about **Reserved Instances** is TRUE?

A. They are tied to a specific EC2 instance
B. They require full upfront payment
C. They apply to billing, not physical instances
D. They cannot be shared across accounts

✅ Answers & Explanations

Q	Correct Answer	Explanation
1	**D**	On-Demand = no commitment, max flexibility
2	**C**	Spot Instances are cheap but interruptible
3	**B**	Compute Savings Plans cover EC2, Lambda, Fargate
4	**C**	Dedicated Hosts allow BYOL and compliance
5	**B**	Incoming data is usually FREE
6	**B**	Inter-AZ data transfer is charged
7	**C**	RI discounts are shared in AWS Organizations
8	**D**	Glacier Deep Archive = cheapest storage
9	**C**	Capacity Reservations ensure capacity, not savings
10	**C**	RIs apply to billing usage

🎯 Exam Tip (VERY IMPORTANT)

If the question mentions:

- **Unpredictable usage** → On-Demand
- **Steady workloads** → Reserved Instances / Savings Plans
- **Interruptible workloads** → Spot
- **Compliance / BYOL** → Dedicated Hosts
- **Unexpected high bill** → Data transfer between AZs or Regions

---

Scenario	Cost
Incoming data to AWS	✅ Free (mostly)
Same AZ traffic	✅ Free
Between AZs	❌ Charged
Between Regions	❌ Charged

Out to internet ❌ Charged

Task Statement 4.2: Understand resources for billing, budget, and cost management.

Knowledge of:
• Billing support and information
• Pricing information for AWS services
• AWS Organizations
• AWS cost allocation tags
Skills in:
• Understanding the appropriate uses and capabilities of AWS Budgets, AWS Cost Explorer, and AWS Billing Conductor
• Understanding the appropriate uses and capabilities of AWS Pricing Calculator
• Understanding AWS Organizations consolidated billing and allocation of costs
• Understanding various types of cost allocation tags and their relation to billing reports (for example, AWS Cost and Usage Report)

Below is a **clear, exam-oriented explanation** of

Task Statement 4.2: Billing, Budget, and Cost Management (AWS CLF-C02)

I'll explain **each concept + AWS service**, how it appears in the exam, and **common traps**.

🧾 Task 4.2 – Billing, Budget & Cost Management (DETAILED EXAM NOTES)

🧠 OVERVIEW (Exam Context)

AWS provides **multiple tools** to:

- **View costs**
- **Control spending**
- **Allocate costs**
- **Forecast future usage**

👉 In the exam, questions usually test **WHEN to use WHICH tool**, not deep configuration.

1️⃣ Billing Support & Information

🔹 AWS Billing Dashboard

- Central place to:
  - View current month charges
  - Download invoices
  - Track usage by service
- Located in **AWS Management Console → Billing**

📌 **Exam Tip:**
If a question asks *"Where can you see your monthly AWS bill?"* → **AWS Billing Dashboard**

🔹 AWS Support Plans (Billing Support)

- **Basic Support** (Free):
  - Billing & account support only
- **Developer / Business / Enterprise**:
  - Technical support + billing help

📌 **Exam Trap:**
Basic support **DOES provide billing support**, but **NOT technical support**

2️⃣ Pricing Information for AWS Services

🔹 AWS Pricing Pages

- Each AWS service has:
  - Public pricing page

    - Region-based pricing
- Used for **manual reference**

📌 Exam scenario:

> "Where can a customer find up-to-date pricing for Amazon EC2?"
> ✔ **AWS Pricing Page**

🔹 AWS Pricing Calculator (VERY IMPORTANT)

Full Form: AWS Pricing Calculator
Purpose:

- Estimate **future AWS costs**
- Compare architectures **before deployment**

Can estimate costs for:

- Amazon EC2
- Amazon S3
- Amazon RDS
- Data transfer
- Many more

📌 **What it is NOT:**
❌ Not used for tracking existing costs
❌ Not used for billing reports

📌 **Exam Keyword:** *estimate*, *forecast*, *before migration*

3️⃣ AWS Organizations (Cost Management Perspective)

Full Form: AWS Organizations
Purpose:

- Centrally manage **multiple AWS accounts**
- Enable **consolidated billing**

🔹 Consolidated Billing (EXAM FAVORITE)

- Single **payer account**
- Combines usage from all member accounts
- Enables:
  - Volume discounts
  - RI & Savings Plans sharing

📌 **Key Benefit:**
Lower overall cost through **aggregated usage**

🔹 Cost Allocation Across Accounts

- Costs can be:
  - Viewed per account
  - Tagged and grouped
- Used heavily with **Cost Explorer** and **Cost and Usage Report**

📌 Exam scenario:

> "Company wants one bill but separate cost visibility"
> ✔ **AWS Organizations + Consolidated Billing**

4️⃣ AWS Cost Allocation Tags

🔹 What Are Cost Allocation Tags?

Tags = **key-value pairs** attached to AWS resources
Example:

Project : HR-App
Environment : Production

🔹 Types of Cost Allocation Tags

Type	Description
AWS-generated tags	Automatically created (e.g., aws:createdBy)
User-defined tags	Created by customers

📌 **Important:**
Tags must be **activated in Billing Console** before appearing in reports.

🔹 Relation to Billing Reports

- Tags appear in:
  - **AWS Cost Explorer**
  - **AWS Cost and Usage Report (CUR)**

📌 Exam scenario:

> "Track costs by department or project"
> ✔ **Cost allocation tags**

5️⃣ AWS Cost Explorer

Full Form: AWS Cost Explorer
Purpose:

- Analyze **historical AWS spending**
- Visual graphs and trends
- Forecast future spend (based on past usage)

📌 **Use When:**

- You want to **analyze existing costs**
- Compare services, accounts, tags

📌 **NOT used for:**
❌ Cost control
❌ Setting alerts

6️⃣ AWS Budgets (CONTROL TOOL)

Full Form: AWS Budgets
Purpose:

- Set **custom cost or usage limits**
- Send **alerts** when thresholds are exceeded

Types of Budgets:

Type	Example
Cost budget	Monthly spend > $1,000
Usage budget	EC2 hours exceed limit
RI/Savings Plan budget	Track commitment usage

📌 Exam scenario:

> "Get notified when spending exceeds limit"
> ✔ **AWS Budgets**

7️⃣ AWS Billing Conductor (Advanced – High-level only)

Full Form: AWS Billing Conductor
Purpose:

- Create **custom billing views**
- Used by:
  - Enterprises
  - Managed Service Providers (MSPs)

📌 **Not deeply tested**, but know:

- Helps show **custom pricing structures**
- Used with **AWS Organizations**

8️⃣ AWS Cost and Usage Report (CUR)

Full Form: AWS Cost and Usage Report
Purpose:

- Most **detailed billing report**
- Includes:
  - Resource-level usage
  - Tags
  - Discounts

- Delivered to **Amazon Simple Storage Service (Amazon S3)**

📌 **Exam Keyword:** *most detailed billing data*

🔁 TOOL COMPARISON (EXAM GOLD)

Tool	Primary Purpose
AWS Pricing Calculator	Estimate future cost
AWS Cost Explorer	Analyze past costs
AWS Budgets	Set alerts & limits
AWS Billing Dashboard	View bills
AWS Organizations	Consolidated billing
AWS Cost Allocation Tags	Track costs by resource
AWS Cost and Usage Report	Detailed billing data

🚨 COMMON EXAM TRAPS

❌ Cost Explorer ≠ Budget alerts
❌ Pricing Calculator ≠ Cost tracking
❌ Tags must be activated first
❌ Consolidated billing ≠ merged accounts

🧠 FINAL EXAM MEMORY RULE

Estimate → Pricing Calculator
Analyze → Cost Explorer
Control → Budgets
Group → Organizations + Tags

Perfect 👍
Here are **10 exam-trap style MCQs** for **Task 4.2 – Billing, Budget & Cost Management (AWS Cloud Practitioner – CLF-C02)**.
👉 **Answers are at the end** (don't peek yet 👀).

🧪 Exam-Style MCQs (Billing, Budget & Cost Management)

Q1.

A company wants to **estimate the monthly cost** of running a new web application on AWS *before deployment*.
Which AWS tool should be used?

A. AWS Cost Explorer
B. AWS Budgets
C. AWS Pricing Calculator
D. AWS Billing Dashboard

Q2.

Which AWS service allows you to **set spending thresholds and receive alerts** when costs exceed a defined amount?

A. AWS Cost Explorer
B. AWS Budgets
C. AWS Organizations
D. AWS Billing Conductor

Q3.

A finance team wants to **analyze historical AWS spending trends** and view costs grouped by service and tags.
Which tool is MOST appropriate?

A. AWS Pricing Calculator
B. AWS Cost Explorer

C. AWS Budgets
D. AWS Billing Dashboard

Q4.

An organization has **multiple AWS accounts** and wants:

- One monthly bill
- Cost visibility per account
- Volume discounts

Which AWS feature enables this?

A. AWS Cost Explorer
B. AWS Billing Conductor
C. AWS Organizations with consolidated billing
D. AWS Pricing Calculator

Q5.

Which statement about **data transfer costs** is TRUE?

A. All inbound and outbound data transfer is free
B. Inbound data transfer to AWS is generally free
C. Data transfer within the same Availability Zone is always charged
D. Data transfer between Regions is free

Q6.

A company wants to **track AWS costs by department and project** in billing reports.
What should they use?

A. AWS Budgets
B. AWS Cost Explorer only
C. Cost allocation tags
D. AWS Pricing Calculator

Q7.

Which type of cost allocation tag is **created by the customer**?

A. aws:createdBy
B. aws:cloudformation:stack-name
C. User-defined tags
D. System-generated tags

Q8.

Which AWS report provides the **MOST detailed information** about usage, costs, discounts, and tags?

A. AWS Cost Explorer
B. AWS Billing Dashboard
C. AWS Cost and Usage Report (CUR)
D. AWS Budgets

Q9.

A startup wants to receive **billing support only**, without paying for a premium support plan. Which AWS Support plan is sufficient?

A. Developer Support
B. Business Support
C. Enterprise Support
D. Basic Support

Q10.

A Managed Service Provider (MSP) wants to present **customized billing views** to different internal teams using AWS Organizations.
Which AWS service supports this requirement?

A. AWS Budgets
B. AWS Cost Explorer
C. AWS Billing Conductor
D. AWS Pricing Calculator

✅ ANSWERS

1️⃣ **C** – AWS Pricing Calculator
2️⃣ **B** – AWS Budgets
3️⃣ **B** – AWS Cost Explorer
4️⃣ **C** – AWS Organizations with consolidated billing
5️⃣ **B** – Inbound data transfer is generally free
6️⃣ **C** – Cost allocation tags
7️⃣ **C** – User-defined tags
8️⃣ **C** – AWS Cost and Usage Report (CUR)
9️⃣ **D** – Basic Support
🔟 **C** – AWS Billing Conductor

🧠 Quick Exam Tip

- **Estimate → Pricing Calculator**
- **Analyze → Cost Explorer**
- **Control → Budgets**
- **Aggregate → Organizations**
- **Deep detail → Cost & Usage Report**

Task Statement 4.3: Identify AWS technical resources and AWS Support options.

Knowledge of:
• Resources and documentation available on official AWS websites
• AWS Support plans
• Role of the AWS Partner Network, including independent software vendors and system integrators
• AWS Support Center
Skills in:
• Locating AWS whitepapers, blogs, and documentation on official AWS websites
• Identifying and locating AWS technical resources (for example AWS Prescriptive Guidance, AWS Knowledge Center, AWS re:Post)
• Identifying AWS Support options for AWS customers (for example, customer service and communities, AWS Developer Support, AWS Business Support, AWS Enterprise On-Ramp Support, AWS Enterprise Support)
• Identifying the role of Trusted Advisor, AWS Health Dashboard, and the

AWS Health API to help manage and monitor environments for cost optimization
• Identifying the role of the AWS Trust and Safety team to report abuse of AWS resources
• Understanding the role of AWS Partners (for example AWS Marketplace, independent software vendors, system integrators)
• Identifying the benefits of being an AWS Partner (for example, partner training and certification, partner events, partner volume discounts)
• Identifying the key services that AWS Marketplace offers (for example, cost management, governance and entitlement)
• Identifying technical assistance options available at AWS (for example, AWS Professional Services, AWS Solutions Architects)

Great — this is the **last task of Domain 4** and very exam-heavy 👍
Below is a **clear, structured, exam-oriented explanation** of **Task Statement 4.3**, with **plain language**, **service full forms**, and **how questions appear in the AWS Certified Cloud Practitioner (CLF-C02) exam**.

🧠 Task Statement 4.3: AWS Technical Resources & AWS Support Options

---

🌐 1. AWS OFFICIAL TECHNICAL RESOURCES & DOCUMENTATION

AWS provides **free, official learning and troubleshooting resources**.
The exam often asks **"Where would you find…?"**

📘 AWS Documentation

- Official service documentation for **every AWS service**
- Includes:
  - Service overviews
  - API references
  - Tutorials

    - Best practices

📌 **Exam use:**

> "How to configure Amazon Elastic Compute Cloud (Amazon EC2) security groups"
> ✔ AWS Documentation

📄 AWS Whitepapers

- Deep, **conceptual explanations**
- Focus on:
    - Architecture
    - Security
    - Compliance
    - Best practices

Examples:

- AWS Well-Architected Framework
- AWS Shared Responsibility Model

📌 **Exam keyword:** *best practices*, *framework*, *design principles*

📰 AWS Blogs

- Updates on:
    - New services
    - Feature launches
    - Architecture patterns
- Written by AWS engineers

📌 **Not for troubleshooting**, more for **learning & updates**

🧭 2. AWS TECHNICAL KNOWLEDGE & GUIDANCE PLATFORMS

🧩 AWS Prescriptive Guidance

- Step-by-step **recommended solutions**
- Covers:
  - Migrations
  - Modernization
  - Architecture patterns

📌 **Exam scenario:**

> "Customer wants proven AWS-recommended patterns"
> ✔ AWS Prescriptive Guidance

❓ AWS Knowledge Center

- **FAQ-style troubleshooting**
- Real-world problems + solutions

📌 **Exam use:**

> "How do I fix…?"
> ✔ AWS Knowledge Center

💬 AWS re:Post

- Community-driven **Q&A forum**
- Replaced legacy AWS forums
- AWS engineers + customers contribute

📌 **Exam keyword:** *community support*, *peer discussion*

🛠️ 3. AWS SUPPORT PLANS (VERY IMPORTANT)

AWS has **multiple support tiers**.
Exam questions focus on **features & response levels**, not pricing.

🟢 Basic Support (Free)

- Billing & account support

- Access to:
  - Documentation
  - Whitepapers
  - re:Post

❌ No technical support

🔵 Developer Support

- Email-based technical support
- For **development & testing**
- Limited response times

🟣 Business Support

- 24×7 technical support
- Phone, chat, email
- Includes:
  - AWS Trusted Advisor checks
  - Guidance for production workloads

🟠 Enterprise On-Ramp Support

- Designed for **customers moving to Enterprise**
- Faster response times
- Proactive guidance

🔴 Enterprise Support

- Highest support tier
- Includes:
  - Technical Account Manager (TAM)
  - Proactive monitoring
  - Architecture reviews

📌 **Exam trap:**
Only **Business & Enterprise** include **full Trusted Advisor checks**

🧑‍💻 4. AWS SUPPORT CENTER

AWS Support Center (in AWS Management Console):

- Open & track support cases
- Access:
  - Trusted Advisor
  - Health Dashboard
  - Support plans

📌 **Exam use:**

> "Where do you open a support ticket?"
> ✔ AWS Support Center

📊 5. MONITORING, HEALTH & OPTIMIZATION SERVICES

🧠 AWS Trusted Advisor

- Provides **best-practice recommendations**
- Categories:
  - Cost Optimization
  - Security
  - Reliability
  - Performance
  - Service Limits

📌 **Exam scenario:**

> "Identify unused resources to reduce cost"
> ✔ AWS Trusted Advisor

❤️ AWS Health Dashboard

- Shows **AWS service health**
- Displays:
  - Outages

    - Scheduled maintenance
    - Region-specific events

🔌 AWS Health API

- Programmatic access to Health events
- Used for **automation & monitoring tools**

📌 **Exam note:**
Dashboard = human view
API = automated systems

🚨 6. AWS TRUST & SAFETY TEAM

- Used to **report abuse** of AWS resources:
    - Spam
    - DDoS
    - Malware
    - Illegal activity

📌 **Exam keyword:** *report abuse*
✔ AWS Trust & Safety Team

🤝 7. AWS PARTNER NETWORK (APN)

AWS Partner Network (APN) = global partner ecosystem.

Types of AWS Partners

🧩 Independent Software Vendors (ISVs)

- Build & sell software on AWS
- Examples:
    - Security tools
    - Monitoring tools
- Often available via **AWS Marketplace**

🏗️ **System Integrators (SIs)**

- Help customers:
  - Design
  - Migrate
  - Manage AWS environments

🎁 Benefits of Being an AWS Partner

- Training & certification
- Partner-only events
- Go-to-market support
- Volume discounts
- AWS credibility

📌 **Exam focus:** *benefits*, not process

🛒 8. AWS MARKETPLACE

AWS Marketplace = digital catalog of third-party solutions.

Offers:

- Cost management tools
- Security tools
- Governance & compliance software
- AMIs (Amazon Machine Images), SaaS, containers

📌 **Exam scenario:**

> "Buy third-party software that runs on AWS"
> ✔ AWS Marketplace

👷 9. AWS TECHNICAL ASSISTANCE SERVICES

🧠 AWS Professional Services

- AWS experts help with:
  - Large migrations
  - Complex architectures
  - Enterprise transformations

👨‍🏫 AWS Solutions Architects

- Provide:
  - Architecture guidance
  - Best practices
- **Not a support plan**
- Often part of sales & onboarding

📌 **Exam trap:**
Solutions Architects ≠ Support plan

🧠 EXAM MEMORY MAP (VERY IMPORTANT)

Need	AWS Resource
Learn services	AWS Documentation
Best practices	AWS Whitepapers
Step-by-step guidance	AWS Prescriptive Guidance
Troubleshooting	AWS Knowledge Center
Community help	AWS re:Post
Cost optimization	AWS Trusted Advisor
Service outages	AWS Health Dashboard
Abuse reporting	AWS Trust & Safety
Third-party tools	AWS Marketplace
Architecture help	AWS Solutions Architects

Here are **10 exam-trap style MCQs** for

Task Statement 4.3 – AWS Technical Resources & AWS Support Options (CLF-C02)

✔ Full-form AWS services included
✔ **Answers at the end**

🧪 Exam-Trap MCQs (Domain 4 – Task 4.3)

Q1.

A user wants **AWS-recommended best practices and architectural guidance** in document form.
Which AWS resource should they use?

A. AWS Knowledge Center
B. AWS Whitepapers
C. AWS re:Post
D. AWS Health Dashboard

Q2.

Which AWS resource provides **step-by-step guidance** for migrations and modernization projects?

A. AWS Documentation
B. AWS Prescriptive Guidance
C. AWS Blog
D. AWS Support Center

Q3.

A developer wants to ask **community members and AWS engineers** a technical question.
Where should they post it?

A. AWS Knowledge Center
B. AWS Whitepapers
C. AWS re:Post
D. AWS Trust Center

Q4.

Which AWS Support plan includes **24×7 access, full AWS Trusted Advisor checks, and production workload support**?

A. Basic Support
B. Developer Support
C. Business Support
D. Free Tier Support

Q5.

Which AWS tool helps customers **identify idle resources and improve cost optimization**?

A. AWS Health Dashboard
B. AWS Trusted Advisor
C. AWS Support Center
D. AWS Knowledge Center

Q6.

A customer wants to **report spam or malicious activity** hosted on AWS.
Which AWS team should they contact?

A. AWS Support Center
B. AWS Professional Services
C. AWS Trust and Safety team
D. AWS Partner Network (APN)

Q7.

Which AWS service provides **real-time information about AWS service outages and maintenance events**?

A. AWS Trusted Advisor
B. AWS Health Dashboard
C. AWS Billing Dashboard
D. AWS re:Post

Q8.

A company wants to purchase **third-party security and cost-management solutions** that integrate with AWS.
Which service should they use?

A. AWS Partner Network (APN)
B. AWS Marketplace
C. AWS Prescriptive Guidance
D. AWS Support Center

Q9.

Which AWS Partner type primarily helps customers **design, migrate, and manage AWS environments**?

A. Independent Software Vendors (ISVs)
B. System Integrators (SIs)
C. AWS Solutions Architects
D. AWS Trust & Safety Team

Q10.

Which AWS service provides **direct expert assistance for large-scale migrations and enterprise cloud adoption**?

A. AWS Knowledge Center
B. AWS Professional Services
C. AWS re:Post
D. AWS Marketplace

✅ ANSWERS

1️⃣ **B** – AWS Whitepapers
2️⃣ **B** – AWS Prescriptive Guidance
3️⃣ **C** – AWS re:Post
4️⃣ **C** – Business Support
5️⃣ **B** – AWS Trusted Advisor
6️⃣ **C** – AWS Trust and Safety team
7️⃣ **B** – AWS Health Dashboard
8️⃣ **B** – AWS Marketplace
9️⃣ **B** – System Integrators (SIs)
🔟 **B** – AWS Professional Services

🧠 Last-Minute Exam Tip

- **Whitepapers → Best practices**
- **Prescriptive Guidance → Step-by-step**
- **Trusted Advisor → Cost & optimization**
- **Health Dashboard → Outages**
- **Marketplace → Third-party tools**

If you want:

- 🔥 **Harder MCQs**
- 🧪 **Full CLF-C02 mock test**
- 📄 **Final 1-day revision cheat sheet**

Just say the word 👍
